Postoperative cooling bandage

Face IB 4002

Optimal cryotherapy after surgery

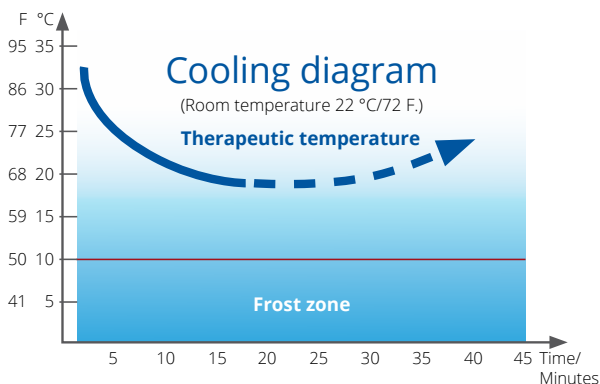

IceBand is a Swedish clinical cold compression bandage specifically developed to relieve postoperative pain and swelling.

IceBand uses cryotherapy/cold therapy to provide an efficient, user friendly and cost-effective method for treating patients after surgery and/or during rehab. Thanks to its unique design, IceBand provides a long-lasting cooling effect for optimal therapeutic benefits, lowering the skin temperature without any risk of frostbites.

IceBand has so far been used to successfully treat more than 300 000 patients in Europe. Tests have shown that 93% of the operated patients recommend the usage of IceBand.

- **Reduces pain and swelling**
- **Single-patient use for hygienic safety**
- **Cost-effective treatment**

IceBand provides a documented cooling effect for 45-60 minutes. Thanks to the protective non-woven fabric of IceBand, skin temperature will never drop below 50°F (10°C), which rules out any risks for frostbites.

Hygienic and environmentally friendly

The cooling elements in IceBand consists of soft ice-sorbitol without any additives. The bandage and its cooling elements can be refrozen and reused up to 30 times without losing effect. After rehab the bandage can be easily disposed of as household waste.

Easy to handle

IceBand is primarily developed for clinical environments. It should be stored in a freezer close to the operating theater to be used immediately after surgery. The compression bandage consists of sealed cooling elements with frozen soft ice-sorbitol and is easily applied using Velcro straps.

Thanks to its user-friendly design, patients can continue to use the bandage once released from hospital and throughout the whole postoperative rehab period. The cooling elements in IceBand can be stored in the household freezer and can be refrozen and reused up to 30 times. After rehab, the bandage can easily be disposed of as household waste.

Safe and cost-effective treatment

IceBand is especially developed as a cryotherapeutic aid after orthopedic surgery. Compared to other medical devices, IceBand is a cost-effective way of treating pain and swelling and provides the orthopedic surgeon with the possibility to offer efficient post-operative treatment to a large number of patients at a low cost.

Since IceBand also facilitates the rehabilitation and recovery processes, it may reduce the time spent in hospital after surgery, optimizing hospital care. The compression bandage is designed for single patient use which significantly reduces the risk of cross contamination.

CAUTION!

All cooling products should be handled with care and only be used in accordance with instructions from a physician.

Should not be used if you suffer from cold allergy, Raynauds phenomenon or cryoglobulinaemia.

If you are uncertain, always ask your physician.
